Foreword

In this compendium you will find goods, services, weapons, magical tools, and other premade objects that may be used playing Archaize. The items tabulated here are meant to act as quick reference or inspiration for your own creations, as each item type has a set of rules for generation detailed in the Archaize Rulebook.

Listings for items may include the fields below:

- **Name** – Item name
- **Bulk** – Item bulk, taking into account both size and weight of an item
- **Qty** – Number of items to match the corresponding bulk value
- **Type** – Rough item category, used mostly for raw materials
- **Cost** – Typical market cost of the item, in units of talents, shekels and darics (t, s, & d). Items deviating from a +0 quality will have their cost affected according to the table below.

Quality	Cost Multiplier
-2	0.5
-1	0.75
0	1
+1	2
+2	5
+3	10

Talents	Shekels	Darics
200	20	1

- **Made From** - Indicates the type of material the item may be composed of. Depending on the level of detail desired, you may look through the relevant material tables to dictate what any particular item is made from. Additionally, raw materials may have a price modifier, indicating how that material impacts the price of the good.

Services describe the monetary cost per day to hire a worker of the noted discipline; the quality of this service affects the cost in similar fashion to items. Services do not account for cost of materials, only labor.
